

Pole-mounted transformers		X
High-voltage tower-mounted electrical transmission lines		X
Pole-mounted electrical transmission lines		X

- The subject site is located in Parcel A of the now decommissioned MDAC C-6 facility. Parcel A is located in the northern portion of the MDAC C-6 facility. The subject site occupies portions of the footprints of what were formerly the locations of buildings 29, 57, 58, and 67 located in the MDAC C-6 Facility.
- The subject site is currently vacant with unpaved and asphaltic paved areas.
- Numerous "clean" soil piles are located in the eastern portion of the subject site on the unpaved surfaces. In addition, numerous "spoiled" soil piles are located in the eastern portion of the subject site, on asphaltic concrete paved surfaces. According to Mr. Mario Stavale, Project Manager with the Boeing Realty Company (formerly the McDonnell Douglas Realty Company), the "spoiled" soil piles are a result of the remediation activities taking place in the northeast portion of the former MDAC C-6 facility property, approximately 400 to 800 feet east-northeast of the current boundaries of the subject site.
- One water well is located in the central portion of the subject site. According to Mr. Stavale, he believes the water well was constructed prior to the development of the property in the early 1940's.

ENVIRONMENTAL SETTING

A review of topographic, geologic, and hydrologic data was conducted to determine the regional setting and environmental conditions within the area of the subject property. Refer to Table III for a summary.

TABLE III
Regional Geologic and Hydrologic Characteristics

Geomorphic Province:	Transverse Range
Regional Geology:	The subject site is located within the City of Los Angeles and is situated in the central portion of the Outer Plain of the Los Angeles Coastal Plain. The Los Angeles Coastal Plain is a sedimentary basin containing thousands of meters of post-Cretaceous sediment overlying crystalline basement rocks. The Los Angeles Coastal Plain is bound to the north by the Santa Monica and San Gabriel Mountains, to the east by the San Bernardino Mountains, to the south by the Santa Ana Mountains, and to the west by the Pacific Ocean.
